

Bigz

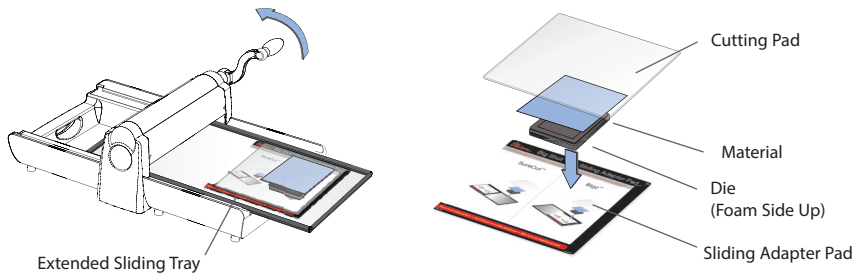

Figure B

Ellison AllStar and Sizzix Bigz Dies

1. Place any AllStar or Bigz die (with the foam side up) directly onto the SuperStar Excel Sliding Adapter pad, which should be in the extended sliding tray.
2. Place paper (or compatible material*) to be cut on top of the die.
3. Place an appropriately sized cutting pad on top of your cutting material and die.
4. Carefully push the Extended Sliding Tray into the opening of the SuperStar Excel machine until the cutting pad contacts the roller.

WARNING

Pinch and cutting hazard. Keep hands, fingers and clothing away from contact with rollers and dies while in use.

5. Note the rotation of the crank handle and continue to rotate it in the same direction until your die, material and cutting pad have passed completely through the rollers in either direction.
6. Remove your finished die-cut shapes and scrap material.

Note: Please refer to Helps and Hints on page 8 when using Crease Rule dies. A crease-rule die is similar to a regular SureCut die; however, it contains both cutting (sharp) rule and crease (blunt) rule.

* A list of recommended compatible materials for use with the SuperStar Excel can be found in the Materials guide on page 11.
